FAST VIDEO CATALOGER

8/2/2021

Fast video cataloger is a powerful video database software for any business that works with or uses videos to find information in Large video archives quickly

Fact sheet 2021

FAST VIDEO CATALOGER IS A POWERFUL VIDEO DATABASE SOFTWARE FOR ANY BUSINESS THAT WORKS WITH OR USES VIDEOS TO FIND INFORMATION IN LARGE VIDEO ARCHIVES QUICKLY

Web page: <https://videocataloger.com/>

Free trial: <https://videocataloger.com/download/>

Price: \$197 for single computer / single-user license. Optional maintenance \$47/Year for free upgrades.

Includes: Lifetime License for the current version. It is possible to move a license to a new computer.

System requirements: Windows 10 or later, i5 CPU or better, Internet required during activation of the program and to share / access shared catalogs.

Space requirement: Video files can be stored locally on a server or a NAS. The video catalog is recommended to be stored locally on an SSD for best performance. 10 GB SSD would be enough for a video catalog with 10000 videos. (using the default index settings)

Video formats: Mpg, mpeg2, mpeg4, avi, qt, rt, wmv, flv, webm, and almost all video clip formats through directshow.

Security: Videos or metadata are local and not send over the Internet. Password protection is possible on the video collection level. Individual video files can have extra encryption for sensitive data and videos.

How does it work: Fast video cataloger is installed locally on a computer and does not require any additional server installation. The database is stored locally, allowing every user to build his personalized video catalog that works regardless of network connection. Video can be stored locally or on a remote server across several storages. Even without access to the video files, it is possible to search and work with the video metadata.

How to build a catalog: Add videos folders or files and standard metadata to the program, index all the videos, scan them for thumbnails, and place them inside your video database. Add more metadata to your catalogs, like keywords to specific scenes, people in the videos, associated images, and more. Quickly search your catalog by keywords and play any video straight from the thumbnail's position.

How to collaborate: Share catalogs in a local company network or over the Internet with videos hosted through a web server. When a catalog is shared, a server version starts to allow people to connect and access the video database.

Benefits: Save time and gain control by finding information in videos quicker than ever before in one powerful yet easy-to-use package. No servers and No cloud needed. Gain a competitive advantage by leveraging video knowledge from video lectures, internal recording, training videos, competition analysis, and other video intelligence sources.

Customize the user interface across one or several screens to create an efficient video dashboard for your workflows. Create custom actions to access external programs, web resources, or scripts. Adopt your custom workflows and integrate with external programs using the integrated scripting API.
