FAST VIDEO CATALOGER

4/12/2025

Fast video cataloger is a powerful video organization software for any business that works with or uses videos. The Windows PC software is run locally on your computer.

Fact sheet 2025

FAST VIDEO CATALOGER IS A POWERFUL VIDEO ORGANIZATION SOFTWARE FOR ANY BUSINESS THAT WORKS WITH OR USES VIDEOS. THE WINDOWS PC SOFTWARE IS RUN LOCALLY ON YOUR COMPUTER.

Web page: https://videocataloger.com/   **Free trial:** https://videocataloger.com/download/

Price: $197 for a single computer / single-user license. Optional maintenance $47/Year for free upgrades, first year of maintenance included. Subscription license, $9.90 per month.

Includes: Lifetime License for the current version. It is possible to move a license to a new computer.

System requirements: Windows 10 or later, i5 CPU or better, Internet required during activation of the program and to share / access shared catalogs.

Space requirement: Video files can be stored locally on a server or a NAS. Store the video catalog on a local SSD for best performance. 10 GB SSD would be enough for a video catalog with 10,000 videos. (using the default index settings)

Video formats: Mpg, mpeg2, mpeg4, avi, qt, rm, wmv, flv, mov, webm, and almost all video clip formats through directshow.

Security: Videos or metadata are local and not sent over the Internet. Password protection is possible on the video collection level. Individual video files can have extra encryption for sensitive data and videos. Not using any remote cloud, your data does not need to leave your computer.

How does it work? Fast video cataloger is installed locally on a computer without additional server installation. The database is stored locally, allowing users to build a personalized video catalog that works regardless of network connection. Video can be stored locally or on a remote server across several storages. Searching and working with the video metadata is possible even when video files are unavailable.

How to build a catalog: Add video folders or files and standard metadata to the program, index all the videos, scan them for thumbnails, XMP, and other metadata, and place them inside your video database. Add more metadata to your catalogs, like keywords to specific scenes, people in the videos, associated images, and more. Search your catalog by keywords or other metadata and play any video straight from the thumbnail's position.

How to collaborate: Share catalogs in a local company network or over the Internet with videos hosted through a web server. A server version lets people connect and access the video database when a catalog is shared.

Benefits: Save time and gain control by finding video information quicker than ever in one powerful yet easy-to-use package. No servers and No cloud are needed. Gain a competitive advantage by leveraging video knowledge from video lectures, internal recordings, training videos, competition analysis, and other video intelligence sources.

Customize the user interface across one or several screens to create an efficient video dashboard for your workflows. Create custom actions to access external programs, web resources, or scripts. Adopt your custom workflows and integrate with external programs using the integrated scripting API.
