

## **Sixth generation of Video Management Tool released by Videostorm Sweden AB**

*VideoStorm Sweden AB has released Fast Video Cataloger 6, the sixth generation of their video management tool. Fast Video Cataloger 6 is a video control centre that help small companies handle all their videos clips. Open interfaces and properties like scripting and custom video properties allow the program to be adapted into most business workflows and technology experiments. Large video sets are managed using intuitive overviews, filtering and search with focus on finding scenes inside videos.*

Sixth generation of Video Database system released by Videostorm Sweden AB. VideoStorm Sweden AB has released Fast Video Cataloger 6, the sixth generation of their video database system. Fast Video Cataloger 6 is a video control centre that help small companies handle all their videos clip. With scripting support and custom video properties the program can be adapted to fit most business workflows and technology experiments. Large video sets are managed using visual search and traditional search with focus on finding scenes inside any video clip.

Fast Video Cataloger 6 is a video clip management software for 64 bit Windows designed to handle tens of thousands of video files on a standard PC. The program extracts a wall of thumbnail images representing all moments in each video. This provides a visual search through inside video files instead of watching the duration of clips. Each thumbnail double as a playable bookmark for that scene and can be enriched with keywords for filtering and searching. Thumbnails are added, removed or annotated with keywords with ease. Fast Video Cataloger 6 is a professional video database tool with a windows-based user layout to fit into existing business contexts. The customizable user interface can utilize more than one computer monitor when available. The preferred video player and video editor is set in preferences and user defined actions is configurable in the preferences as well. Drag files from the program to external video tools and drag files or folders into Fast Video Cataloger 6 to automatically build walls of thumbnails for more videos. Keyword searches are used to identify individual scenes in videos and present relevant footage. New thumbnails can be added manually by the user while playing as single captures or as burst captures starting with a specific thumbnail. Fast Video Cataloger 6 is a tool for companies in any industry to manage video of all kinds. Fast Video Cataloger run under 64bit Windows 10, 8.x/7 with .NET framework. A single-user license cost \$197(US). Multi-user discounts are available.
